Briefing Note
Findings for Cambridge for IMD Index 2015

Foreword

The Department of Communities and Local Government (DCLG) published the English Indices of Deprivation 2015 (ID 2015) on the 30 September 2015. The indices are combined into the composite Index of Multiple Deprivation 2015 (IMD 2015). Documents, including an Infographic, Guidance and the Main Findings can be found here: https://www.gov.uk/government/statistics/english-indices-of-deprivation-2015

The IMD ranks each small area in England from:

1st most deprived area — 32,844th least deprived area

32,844 small areas (called Lower-layer Super Output Areas) in England with an average of 1,500 residents each

An IMD score for an area is taken from the average score for seven domains of deprivation, each with a different weighting. This briefing note will highlight the findings from IMD Index scores, including sub-index and the domains, looking more in depth at the highly ranked areas and their characteristics.

Contents

1. Research Group IMD Summary

Cambridgeshire Research Group has provided a Summary Report looking at IMD data for Cambridgeshire and comparing the differences in national and local ranks and deciles from IMD 2010 to IMD 2015. It can be found here:

http://www.cambridgeshireinsight.org.uk/deprivation-0

It highlights caveats in using the historical data that include:

- LSOA definitions have changed between the 2015 and 2010 releases. As such, some locations will not be comparable at all.
- The variables used to define each indices of deprivation have been updated with each publication. As such, changes in apparent deprivation may reflect these changes in methodology rather than actual changes in local circumstance.

2. Main Findings for IMD Cambridgeshire

- Compared to 2010, Fenland and East Cambridgeshire now rank as more deprived in national terms than previously - Cambridge City ranks as less deprived. The movement of South Cambridgeshire and Huntingdonshire is not significant.
- Cambridgeshire now has 16 LSOAs in the 20% most deprived nationally – this is compared to 9 in 2010. Two are in Cambridge City, two are in Huntingdonshire and 12 are in Fenland.
- Four of the LSOAs in Fenland are in the 10% most deprived nationally, all of which are in Wisbech.Eight of the top 10 most deprived LSOAs in Cambridgeshire are in Fenland. Two are in Cambridge City.
- 49% of LSOAs in Cambridgeshire have remained in the same national decile (group of 10%) from 2010 to 2015.Overall 56% (198) of LSOAs in Cambridgeshire have increased in national ranks (are measured as being relatively less deprived) since 2010. Within this, 28 LSOAs have increased (improved) by 4000 – 8000 positions, out of 32,844

Additionally the Research Group has included the statistical release in **Cambridgeshire Atlas**, an interactive mapping tool, which can be used across all of the domains. Some of these maps have been used in this briefing.
http://www.cambridgeshireinsight.org.uk/deprivation-0

The national indices of **deprivation explorer** also allows an investigation of IMD scores in more depth. It can be found here:
http://dclgapps.communities.gov.uk/imd/idmap.html

3. Summary of findings for Cambridge

- Overall Cambridge's Average IMD Rank has increased by 39 places since 2010, from 188 to 227 in 2015, with 1 being the most deprived.
- The ten most deprived LSOAs in Cambridge are in the North and North East of the City. Three of the ten have a lower national IMD 2015 ranking than in 210. The other seven have higher national IMD 2015 rankings than 2010. Please refer to Map 1 and Table 1.

4. Roads covered by ten lowest ranked LSOAs

The following maps show the roads covered by the ten lowest IMD 2015 ranked LSOAs in Cambridge, to help identify disadvantaged communities.

**Map 2: Arbury LSOAs in Cambridge 10 lowest IMD Scores**
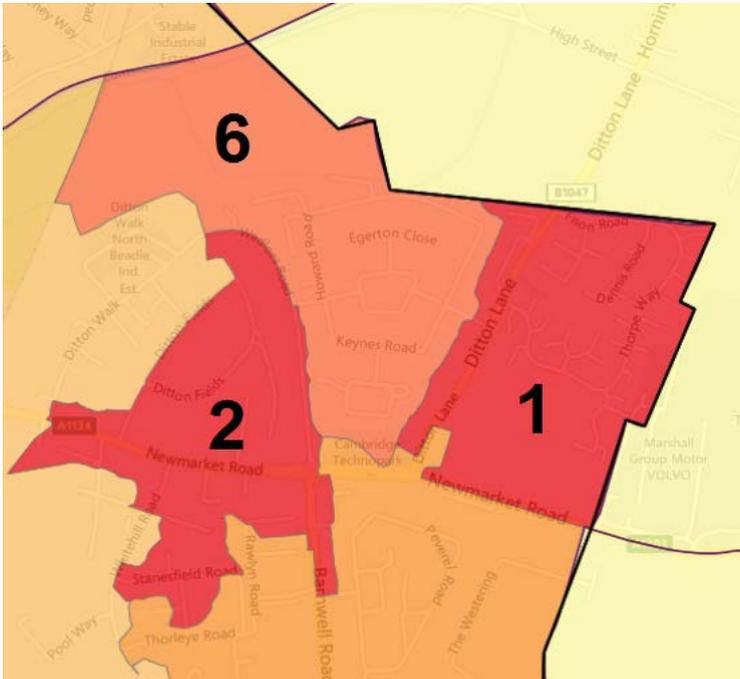

Map 3: Kings Hedges LSOAs in Cambridge 10 lowest IMD Scores
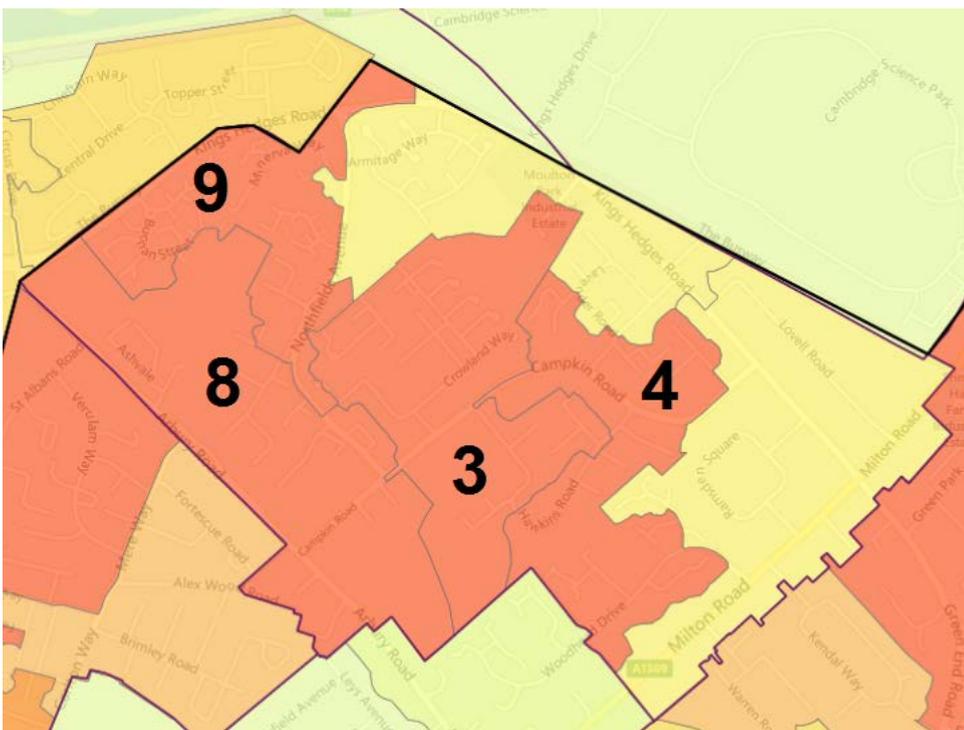

Map 4: Arbury LSOAs in Cambridge 10 lowest IMD Scores

Map 5: East Chesterton LSOAs in Cambridge 10 lowest IMD Scores

5. Changes in IMD Rankings

- Out of Cambridge's 70 SLOAs, only 9 (13%) have seen a decrease in their national IMD ranking position – so are relatively more deprived than they were in 2010. The remaining 61 SLOAs (77%) have seen an increase in their national IMD ranking position. Please refer to Map 2 for the five SLOAs with highest and lowest changes in ranking and Tables 2.

Map 6: Five largest increases and decreases in LSOAs ranking in IMD2015
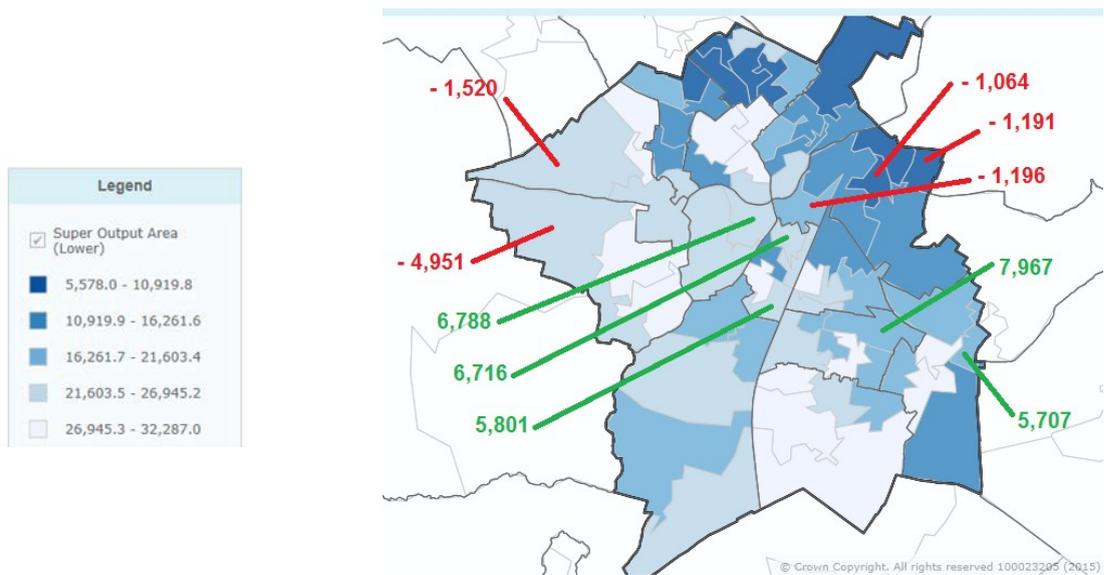

Table 2: Top five LSOAs showing changes in ranking

Ward	LSOA code (2011)	IMD Rank 2015	IMD Rank 2010	Negative Change
Newnham	E01017984	25,496	30447	-4,951
Castle	E01017956	25,735	27255	-1,520
Abbey	E01017943	19,496	20692	-1,196
Abbey	E01017948	5,578	6769	-1,191
Abbey	E01017946	5,861	6925	-1,064

Ward	LSOA code (2011)	IMD Rank 2015	IMD Rank 2010	Positive Change
Coleridge	E01017967	18,013	10246	7,767
Market	E01017983	26,205	19417	6,788

Petersfield	E01017987	24,222	18421	5,801
Cherry Hinton	E01017963	20,785	15078	5,707

6

6. IMD Deciles

It is common to describe how relatively deprived a small area is by saying whether it falls among the most deprived 10 per cent, 20 per cent or 30 per cent of small areas in England (although there is no definitive cut-off at which an area is described as 'deprived'). Chart 1, below, shows the proportion of LSOAs for each district falling within each decile.

Chart 1: Proportion of LSOAs in each decile by district

**Chart 2**, below, shows the proportion of the LSOAs that make-up each of the deciles in the "bubble" format.
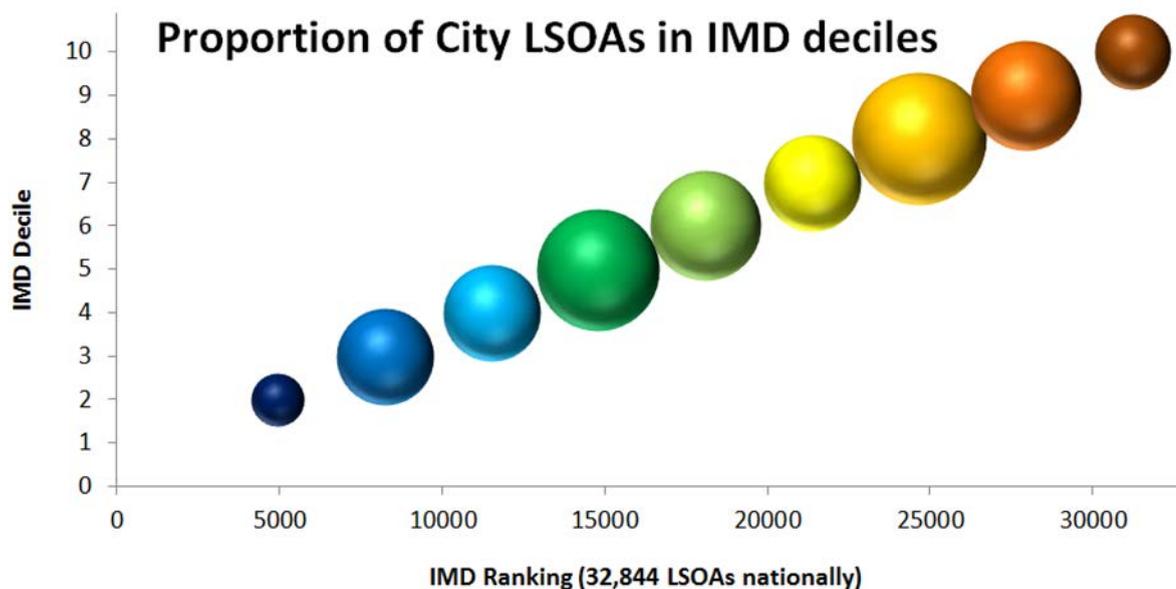

- Fenland has just over two 40% of its population living in the 30% most deprived deciles and in contrast South Cambridgeshire has 40% of its population living in the least deprived 10% decile. The Cambridge spread of LSOAs across the deciles is more even than for the other districts, although the city has no LSOA's in the most deprived 10%.

- Nearly 40% of residents in the city live in the 8,9,10 least deprived deciles.

- Two LSOAs in Abbey ward appear in the 2nd decile (lowest 20% IMD score nationally) in IMD 2015. Previously two LSOAs in Kings Hedges were in the 2nd quintile (20% most deprived nationally). Please refer to Table 3 below.

Table 3: Decile position for ten lowest LSOAs in Cambridge

Ward	LSOA code (2011)	City Decile 2015	Cambs Decile 2015	National Decile 2015	National Quintile 2010
Abbey	E01017948	1		2	2
Abbey	E01017946	1		2	2
Kings Hedges	E01017975	1		3	2
Kings Hedges	E01017977	1		3	2
Arbury	E01017952	1		3	2
Abbey	E01017944	1		3	2
East Chesterton	E01017971	1		3	2
Kings Hedges	E01017978	1		3	1 (20% most deprived)
Kings Hedges	E01017979	1		3	1
Arbury	E01017953	2		4	2

7. Income Deprivation Affecting Children Index

The IDACI measures the proportion of all children aged 0 to 15 living in income deprived families. The definition of low income includes both those people that are out of work and those that are in work but who have low earnings.

Main findings for IDACI in Cambridge

- Cambridge's Rank of Average Scores for IDACI in 2015 was 201 out of the 326 district local authorities, with 1st being the most deprived. In comparison Fenland had a Rank of Average Score of 83 for IDACI 2015.
- Four of Cambridge's 70 SLOAs fall within the worst 20% of LSOAs in the country in the Income Deprivation Affecting Children Index.
- 14 LSOAs (20%) saw a deterioration in their national ranking positions in the IDACI whilst 56 (80%) LSOAs improved their position, since 2010.
- The LSOA in Abbey with the lowest ranking position in the IDACI was close to its previous point in 2010. An LSOA in Arbury has moved into the lowest ranking ten LSOAs in Cambridge for the first time (E01017952).
- Six LSOAs, covering a part of Arbury and Kings Hedges ward form a cluster of lower ranking IDACI LSOAs.
- One LSOA in West Chesterton moved 6,863 places or just over 20% of national ranking places in the five years since IMD 2010.
- The lowest ranking LOSA had just over a third of children that were income deprived.
- One fifth of all LSOAs in Cambridge contain between 24% and 34% of children living in income deprived families.

8. Income Deprivation Affecting Older People Index (IDAOP)

The Income Deprivation Affecting Older People Index (IDAOP) measures the proportion of all those aged 60 and over who experience income deprivation.

Main findings for IDAOP in Cambridge

- Cambridge's Rank of Average Scores for IDAOP in 2015 was 182 out of the 326 district local authorities, with 1st being the most deprived. In comparison Fenland had a Rank of Average Score of 83 for IDAOP 2015.
- One of Cambridge's 70 LSOAs fell within the worst 20% of LSOAs in the country in the Income Deprivation Affecting Older People Index (IDAOP).
- 22 LSOAs (31%) had a lower national ranking position in the IDAOP for 2015 compared to 2010 whilst 48 (69%) had improved their position.
- The lowest ranked LSOA in Cambridge for IDAOP was 1,300 places lower than the next ranked LSOA and contained just under a third of income deprived older people.
- The lower ranked IDAOP LSOAs have a greater distribution across the City and aren't clustered in the North in the way that deprivation affecting children is.
- An LSOA in Romsey improved by 7,900 places in the national ranking for IDAOP between 2010 and 2015.
- One fifth of all LSOAs in Cambridge contain between 21% and 29% of older income deprived people over sixty years of age.

9. OAC Portraits Description of the City's 20% (worst) LSOAs IMD 2015

Chart 3: LSOAs in 20% national IMD decile showing OAC characteristics
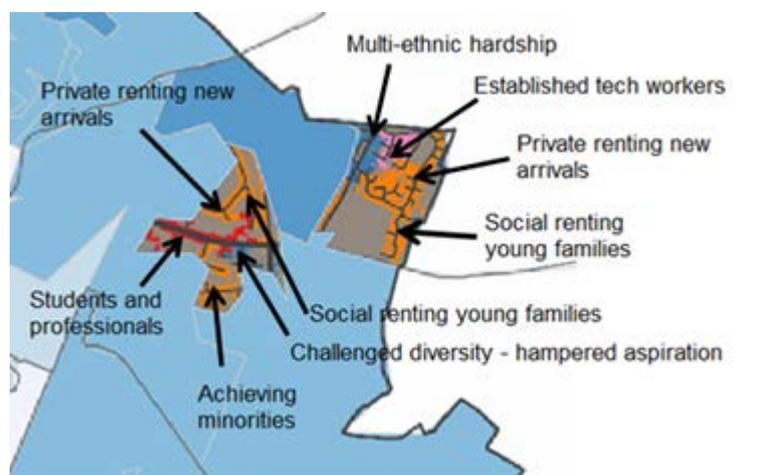

ONS Output Area Classification provides an insight into the type of communities that make-up an area. The classification reflects over 60 different Census findings to give a broad feel for a community but does not reflect everyone living within it.

A clickable OAC Map can be found here: http://www.maptube.org/map.aspx?mapid=960

4a1 – Social renting young families

This subgroup, when compared with the parent group, has a higher proportion of children aged 5 to 14, a higher proportion of people who have Pakistani ethnicity, and a higher proportion who were born in the UK or Ireland. Households are more likely to live in semi-detached properties, and to live in social rented accommodation. Unemployment is more prevalent when compared with the parent group.

4a2 – Private renting new arrivals

When compared with the group, this population of this subgroup has a lower proportion of people who have Black or of mixed ethnicity. Residents are more likely to have been born in other EU countries. Households are more likely to be living in private rented accommodation.

7a2 – Hampered aspiration

The population of this subgroup has a lower representation of people of mixed ethnicity or of Black ethnicity when compared with the parent group. A higher proportion of households live in terraced houses and in privately rented accommodation when compared with the parent group. A higher proportion of people work in the information and communication, financial, and public administration related industries.

7a3 – Multi-ethnic hardship

The age make-up of this subgroup is higher in the 5 to 14 age group when compared with the parent group. Whilst there are higher proportions of people of mixed or Black ethnicity, all ethnic groups are well represented, though a lower proportion of people were born in other EU countries. Households were more likely to live in semi-detached properties and were more likely to live in socially rented accommodation. Workers were more likely to be employed in transport or storage industries.

4c1 – Achieving minorities

The population of this subgroup has a higher proportion of people who have Pakistani ethnicity, and lower proportions with Chinese and Black ethnicity than the parent group. A lower proportion of residents were born in other EU countries. Households are more likely to live in detached and semi-detached properties, and to own their own property. Households are also less likely to live in overcrowded conditions.

3d2 – Established tech workers

The population of this subgroup is slightly more likely to have Black ethnicity and more likely to be born in the UK or Ireland, and to have non-dependent children. There is a higher proportion of households who live in terraced housing, and a higher proportion living in socially rented accommodation. Households are also less likely to live in overcrowded conditions.

2a3 – Students and professionals

The population in this subgroup contains higher proportions of children aged 0 to 14, and adults aged 25 and over than the parent group. The subgroup has a lower proportion of people living in communal establishments than the parent group, with higher proportions of people who are married or separated.

10. ACORN Consumer Classifications for 10 highest Ranked LSOAs

Acorn is a geodemographic segmentation of the UK's population. It segments households, postcodes and neighbourhoods into 6 categories, 18 groups and 62 types. By analysing significant social factors and population behaviour, it provides precise information and an in-depth understanding of the different types of people.

The User Guide (available to download at www.caci.co.uk/acorn) looks at each Acorn type across a wide range of demographic, behavioural and attitudinal attributes. The descriptions of each category, group and type provide an overview of the wider range of topics for which information is available.

11. Cambridge IMD Domains

The domains making up the Index of Multiple Deprivation are shown below in Chart 3.

Chart 14:

The weights for each domain were derived from consideration of the academic literature on poverty and deprivation, as well as the levels of robustness of the indicators. Each of these domains is based on a basket of indicators. As far as is possible, each indicator is based on data from the most recent time point available; in practice most indicators in the Indices of Deprivation 2015 relate to the tax year 2012/13.

The national indices of **deprivation explorer** allows an investigation of the domains in more depth. It can be found here: http://dclgapps.communities.gov.uk/imd/idmap.html

The domains scores for Cambridge City Council, as a local authority district, are shown in Chart 4, below. As a reminder there are 326 local authority districts included in IMD 2015, so the ranking score for each district domain is out 326, with 326th being the least deprived and 1 the most deprived.

It can be seen that whilst the Cambridge City local authority district domains scores are amongst the least deprived the "Living Environment Domain", "Barriers to Housing Services Domain" and "Crime Score" are lower. Our Living Environment Deprivation score is at 15% of the most deprived local authorities. The domain is made-up of indicators that include: houses without central heating; houses in a poor condition; air quality and road traffic accidents involving injury to pedestrians and cyclists.

Chart 15: Scores for Cambridge Domains of Deprivation
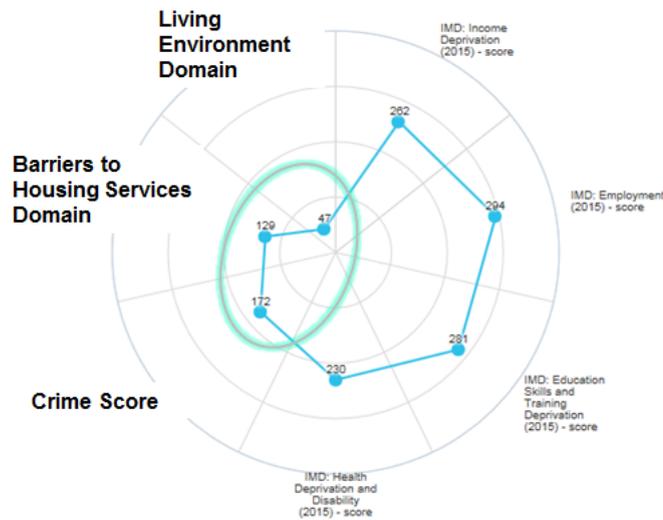

12. A Closer look at the Living Environment Domain (Worst City Domain)

Map 11, below, extracted from the deprivation explorer, shows that we have six LSOAs (purple) that are in the worst 10% nationally for the "Living Environment Domain". The worst scoring indicators that make-up the domain are pointing towards the LSOAs with the lowest rankings for these indicators. It seems that the "Outdoor Living" component of the domain, which consists of air quality and road traffic indicators are pushing this domain higher because these indicators have a greater comparative ranking.
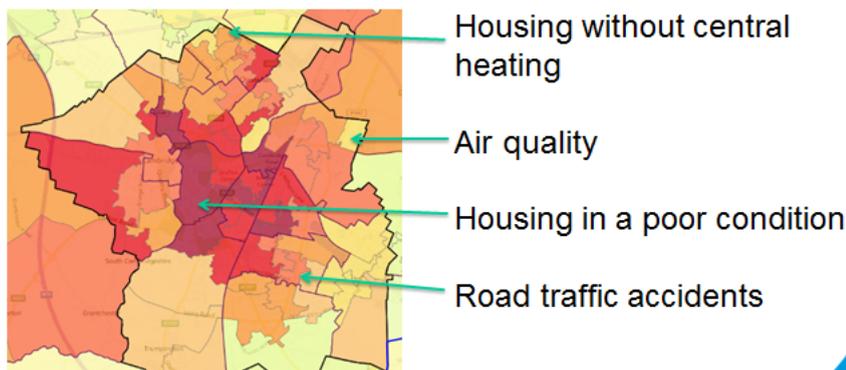

- Air quality is an estimate of the concentration of four pollutants and is based on 2012 figures. The score for the LSOA is 1.24 with the worst nationally at 2.301
- Road traffic accidents are based on accidents that involve death or personal injury to a pedestrian or cyclist and is a rate per 1,000. The score is 2.55 for the LSOA with the worst nationally at 7.204. Housing without central heating is a measure of houses that are expensive to heat and is 0.054 for the LSOA with the worst nationally at 0.338.
- Housing in a poor condition is a modelled estimate of the proportion of social and private homes that fail to meet the Decent Homes standard. The score for the LSOA is 0.441 with the worst nationally 0.955.

13. Looking at Cambridge IMD Domains by Ward

There are usually six LSOAs in each ward with an average of roughly 1,500 residents and 650 households in an LSOA.

The following maps (12 – 26) show the location of each LSOA in a ward, with its identifying number, and the charts show, in the form of a "spider diagram", how each LSOA scores across 10 domains.
