

Scrub management (grassland): Scrub work will be required to reduce the encroachment of scrub in to the grassland and on the raffle butt

Conservation Grazing: A key management objective would be to establish a conservation-grazing regime to enhance plant and invertebrate diversity. The aim would be to graze the reserve throughout the year with cattle.

Interpretation panels: At the main access points interpretation panels will describe the history of the reserve and the wildlife to be enjoyed

Access points: Constructed to DDA regulations kissing gates will be installed to restrict bike access. A cycle rack will be provided at the main access point from Barnwell Road

New Cycle racks - at the Barnwell Road entrance

Remove fence within grazing area

2 bar Post and Rail Fencing

Cattle Trough

Restore hedge line: To establish a secure boundary for the introduction of cattle.

Upgrade pathway: The existing pathway will be re-instated

Establishment of chalk glades: Following on from the work carried out in winter 2009, areas of scrub would be reduced and the top layer of soil removed to expose chalk. It is hoped chalk grassland species such as the Bee Orchid, which is found at Barnwell East LNR, would become established
