

(CCC) Climate

1. How much of your local authority land (in hectares or acres) owned or leased is intended to be used to capture carbon to reduce emissions in line with your climate change mitigation targets in 2050 and 2030 (or another interim year between now and 2050 if not available)?
2. How will carbon be sequestered or captured on this land across each of these categories:
 - a. Tree planting
 - b. Peatland restoration
 - c. Other ecosystem creation
3.
 - a. Has your local authority been approached by a private organisation to purchase 'carbon credits' or the carbon that could be sequestered by your land in the last 5 years?
 - b. If yes, by whom?
 - c. If yes, Have you established private agreements with these organisations to sell 'carbon credits'?

*Carbon credits here are defined as the receipt of payment for the provision of capturing carbon on behalf of another party. If the provision of this information is likely to exceed costs limits that I would be willing for information for point 3a to be for the last 2 years.

Response

We ascertain the Council does not hold the information you seek.

You may be interested in a tree canopy project which broadly aligns with your request and the information can be found on our website.
