How to change a 2D Bathroom Light Bulb

STEP 1: Turn off the light at the wall.

STEP 2: Remove the cover:
   A: Take out the screws remembering to support the cover.  Or
   B: By gently pushing the cover inward, within the mounting and then slide the cover to one side, releasing the holding clips: it will release.

STEP 3: Change the bulb by holding the centre point of the bulb unit (not the bulb’s itself) and pulling it out of the fitting.

STEP 4: Buy a new bulb: we recommend you take the old bulb with you to make sure you get the correct type. Keep a spare bulb at home.

STEP 5: To replace: simply push the new bulb back into the fitting, and secure the cover with the screws or push it back on.

The Light: Shown here is the Thorn LEOPARD 1X16W TC-DD NC OP RD HVL, 1830, the two pin light bulb pulls straight out.

The Bulb: Depending on the size you will need either:
   • 16W 2D bulb - 2 pin or
   • 28W 2D bulb - 2 or 4 pin

Key Benefit: The bulb is long lasting and 80% cheaper to run than standard bulbs

Remember: If you are unable to change the bulb for any reason ask a family member, neighbour or friend to help with this job.
